FEATURED PROJECT: ABBOTSFORD COMMERCIAL TERRACE

Modular Planter Boxes | LICOM76™

H2O Designs have transformed an empty commercial terrace into a functional and beautiful space with custom-built modular planter boxes made entirely from LICOM76™. We worked in conjunction with the landscape architect from [John Patrick Architects](#) to create an unusual planter box layout with a built-in bench seat.

The planter boxes have a two-toned effect with a polished concrete base and rust finished accent to define the bench seat and wave pattern. The multi-layered design highlights the

flexibility of LICOM76™ and the endless possibilities when constructing with an organic form.

The modular LICOM76™ planter boxes are connected onsite to create a seamless exterior with the appearance of a single large planter. The weight restrictions placed on this commercial terrace meant the lightweight nature of LICOM76™ was perfect for creating the illusion of a concrete planter without the excessive weight.

The penetrations for irrigation are linked through the planters on-site during installation and the drainage provisions are prefabricated in-house.
