

FEATURED PROJECT: MOUNTIES

(Mt. Pritchard & District Community Club Limited, Mt. Pritchard, NSW)

H2O DESIGNS worked collaboratively with *Boden Projects* to develop, design & manufacture the unique water feature concept supplied by *Altis Architecture*. Design of the structure, hydraulics & water elements allowed for the fabrication of a functional water feature for Mounties RSL.

Engineered to be fabricated as one unit, cleverly encasing all the necessary components, the impressive 7.5m and 5.5m long features were then delivered on site as complete units, facilitating a quick & sustainable installation process for the clients.

Access panels at each end of the features were included to ensure the future service & maintenance of the hydraulic and filtration components.

Visually the water features are enhanced by the metal sculpture that has the illusion of floating on water, with subtle movement in the reflective pond & water then cascading over the edge into a lower return catchment pond.
