

FEATURED PROJECT: THE SEBEL, HASTINGS ST. NOOSA

Featured this month is the retrofit of the main entry water feature located at The Sebel, on the iconic Hastings St in Noosa. This water feature is a unique piece, with a combination of cascade water walls and tiered ponds, H2O has brought new era of life and beauty to what was once a grand feature.

A mix of polished concrete, Italian tiles, stainless steel and a unique Q Crystal finish on the pond internals creates an intriguing and calm visual aesthetic.

The impact of this feature on the surrounding area isn't the only beauty of the design.

Its real success lies under the decorative finishes and in the way LICOM76™ was used to design and pre fabricate components, retrofitting the existing stepped water feature and utilizing the existing hydraulic system.

After seeing a H2O brochure on our KUBE planters, the client who had originally planned to re tile the feature engaged H2O to collaborate on the idea of applying these “rectangular vessels” in a water feature format. With minimal budget H2O Designs created a concept that would allow the existing feature to be retrofitted using prefabricated ponds and water walls specifically designed to suit the dimensions, levels and falls of the site.

This feature is a testament to what can be achieved using prefabricated materials like LICOM76™.

Minimizing the amount of onsite work required, The Sebel have gained a modern water feature with minimal disruptions and cost.

The water feature was designed in 3 parts after extensive onsite measurements. The first water wall (1535mm x 755mm) is clad to the existing wall and delivers water from a trough above through a custom designed spillway. The main section of the feature was built in two parts of varying heights, widths and lengths. Every spillway, cascade and water wall has been purposely positioned to suit and work with the existing structure underneath whilst still meeting the visual requirements of the project. Once installed on site the feature spans over 2.4m in length and 1.7m in width with an overall height of 2.5m.
