

## **FEATURED PROJECT: ARINTJI RESTAURANT, FED SQUARE**

Featured this month are our stunning LICOM76™ copper clad planter boxes manufactured for Arintji Restaurant in Federation Square. Designed in conjunction with SJB Interiors, H2O Designs were approached to design a series of interlocking planter boxes with a decorative copper surface that met the vigorous demands of one of Melbourne's iconic spaces, Federation Square.

Creating a decorative boundary to the Arintji Restaurant, various sized planters at 2000mm(L) or 1340mm(L) x 450mm (W) x 450mm (H), were installed and fitted with internal stanchions and locking plates, to ensure they were securely locked together, eliminating any movement which was imperative for their public space location.

Finishing touches to the planter box system were fabrication of the custom built kickers, suited to the site slopes and levels and the 'Arintji' logo was incorporated into the most prevalent planter box, backlit through an internal light box built into the planter box wall. The combination of tiered planter boxes, copper material, luscious planting ensures the Arintji Restaurant stands out as a beautiful addition to the Fed Square area.
