

FEATURED PROJECT: CANDELA NUEVO / Q2 DECK

Dasch Associates engaged H2O Designs to utilise their lightweight manufacturing solution, LICOM76™ for the uniquely designed seat/bench/planter box. This was applied to the concept, giving the client a prefabricated solution without being restricted by traditional concrete manufacturing processes.

CONCEPT DEVELOPMENT

H2O Designs applied its vast knowledge of their product to the design through an initial hand sketch and 3D CAD designs. The original concepts were tweaked and scaled to suit the LICOM76™ manufacturing process.

MANUFACTURE

Manufactured off site in our Melbourne factory, each component follows a strict hand made manufacturing process. They are quality checked throughout the entire process and then finished in a decorative polished concrete finish.

INSTALLATION

Manufactured for easy installation and to suit the lift dimensions, each prefabricated piece was hand delivered through the lift and assembled on site as modular components.
